

Traveller CL

Leading the way
in reliability and efficiency

TRAVELLER CL

MOBILE OR STATIONARY APPLICATION

The Traveller CL made by ICA is intended for stationary use at stops and railway stations. It is also intended for mobile use in regional rail and local transport vehicles.

The basic version of the machine enables proximity payment with EC / credit card and mobile phone.

The Traveller CL not only provides ticket selling, but also additional applications, Display of the departure times or the possibility of call centre support for customers during the ticket purchase.

The display has 2 functional areas for different applications. The bottom area contains the selling application and, for example, the up-to-date departure schedule can be displayed online in the upper area.
