

Traveller CLS

Trendsetting reliability
and efficiency

TRAVELLER CLS

mobile or stationary application

The Traveller CLS made by ICA is intended for mobile use in all kinds of different rail vehicles and buses. In addition, use in railway stations and booking offices is also possible.

The basic version of the vending machine enables contactless payment with debit/credit card and mobile phone. The Traveller CLS offers not only ticket purchase (ID/account-based ticketing) but also the control of e-tickets (including VDV-KA, UIC, barcode & NFC) and additional applications such as the display of departure times for the customer.

The display has two functional areas for different applications.

The bottom area contains the selling application and, for example, the up-to-date departure schedule can be displayed online in the upper area.

Technical data

▪ Housing dimensions	W 230 x D 220 x H 642 mm
▪ Display	10.1 inch, touch display (PCAP technology), portrait format, display tilt 18°
