

# Ticketing Inside

THE CENTRAL SALES BACKGROUND SYSTEM.

Trendsetting reliability  
and efficiency

# MODULAR AND INTUITIVE MANAGEMENT OF SALES CHANNELS

## Advantages at a glance

- One system for all sales channels:
  - o Mobile and stationary ticket & information terminals
  - o POS systems
  - o Mobile data collection devices
  - o Mobile ticketing (mobile phone ticket/German ticket)
  - o ID/account-based ticketing
  - o Subscription management
  - o Integration of third-party systems (peripheral systems)
  - o Control infrastructure
  - o Increased transport charges (EBE)
  - o Fare administration
- Multi-client capable, modular and scalable system architecture
- On-premises or cloud-based
- Hosting in a redundant visualisation environment in a TÜV-certified German data centre
- Optimisation and automation of business processes in the area of ticketing (incl. reporting)
- Management and maintenance of all central master data
- Tariff management for central tariff server and provision of data for third-party systems
- Generation of the required revenue reports
- Definition of all functional modules (subscriptions, e.g. end customer, student, semester, job tickets, etc.)
- E-ticketing for issue and control of travel authorisation
- Central accounts receivable management for all necessary functional areas (e.g. invoices, EBE entry, reminders etc.)
- Provision of APIs for third-party systems
- Reports and statistics on ticketing and service in real time
- Monitoring system for front-end devices
